Digital Literacy Project Report

Name: Jaswanth Kumar Mahanthi

Registration Number: 25BAI11054

Branch: CSE (AIML)

Year: 1st Year B.Tech

Course Code: CSE0001

Course Title: Digital Literacy

Date: 26 March 2026

INTRODUCTION

This project is part of the Digital Literacy course and focuses on building essential digital skills required for students. As a Student Digital Ambassador, the objective was to create awareness about digital tools, online safety, and professional communication.

The project includes tasks such as creating an infographic, building a digital portfolio, exploring coding platforms, learning email etiquette, and understanding cybercrime. Through these activities, I gained practical knowledge about using digital platforms effectively and responsibly. This project helped me understand the importance of maintaining a professional online presence and staying safe in the digital world.

Task 1 : Write-up

For Task 1, I created a digital literacy awareness infographic using Canva. The infographic explains the concept of digital literacy, useful digital tools for students, and safe internet practices. I also included email etiquette as an important aspect of professional communication.

The design was created using a clean and visually appealing template with proper use of colors, icons, and headings. The aim was to present information in a simple and easy-to-understand format so that students can quickly grasp important concepts.

While working on this task, I found it interesting to explore different design tools and layouts in Canva. The most challenging part was organizing the information in a clear and concise way without overcrowding the design. Overall, this task helped me understand how to communicate information visually.

Task 2 : Write-up

For Task 2, I created my digital portfolio using platforms such as GitHub, LinkedIn, and Kaggle. GitHub is a platform used to store and manage projects, especially coding-related work, while LinkedIn is a professional networking platform that helps in building connections and showcasing skills and achievements. Kaggle is a data science platform that provides datasets and learning resources for machine learning.

Creating profiles on these platforms helped me understand the importance of maintaining a professional online presence. It also gave me insight into how students can present their skills and projects effectively to recruiters and internship providers.

Over the next four years, I plan to actively use GitHub to upload my projects and improve my coding skills. I will use LinkedIn to connect with professionals, explore internship opportunities, and stay updated with industry trends. Additionally, I plan to use Kaggle to practice data science and machine learning concepts. These platforms will play an important role in my academic and professional growth.

Task 3 : Write-up

For Task 3, I explored coding and collaboration platforms to understand their role in academic learning. I used HackerRank, a coding practice platform, to solve a beginner-level problem called “Solve Me First.” This activity helped me understand basic programming logic and improved my problem-solving skills.

In addition, I created a Google Form titled “Digital Literacy Quiz” to assess awareness among students. The form included five questions consisting of both multiple-choice and short-answer types. I also explored the responses feature, which helps in collecting and analyzing data efficiently.

Through this task, I learned how digital platforms can support learning and collaboration. HackerRank is useful for practicing coding and preparing for technical interviews, while Google Forms is helpful for creating surveys and gathering feedback. Overall, this task enhanced my understanding of using digital tools effectively for both technical and communication purposes.

Task 4 : Write-up

In Task 4, I learned about professional email communication and social media etiquette. I wrote two formal emails, one requesting an assignment extension and another applying for an internship opportunity. This helped me understand the importance of using proper subject lines, polite language, and structured content in emails.

I also created a checklist of do’s and don’ts for responsible social media use. I realized that poor digital communication can create misunderstandings and leave a negative impression. Using proper etiquette ensures clear and respectful communication. This task improved my awareness of professional behaviour in digital platforms.

Task 5 : Write-up

While researching about cybercrime, I was surprised to learn how easily people can fall victim to UPI fraud due to lack of awareness. Many users are unaware that approving a request can lead to money being deducted from their account.

This task made me realize the importance of being cautious while using online payment systems. I have decided that I will never share my OTP or approve unknown payment requests without verifying the source. I will also be more careful while clicking on links and will ensure that I use only trusted applications for transactions.

CONCLUSION

This project helped me understand the importance of digital literacy in today's world. I learned how to use various digital tools, communicate professionally, and stay safe online. The tasks provided practical experience and improved my confidence in using digital platforms. Overall, this project was very useful in developing essential skills that will help me in my academic and professional journey.
